

LARQ's bottles are the globe's first self-cleaning and self-purifying water bottles. UV-C technology in the lid cleans the inside surfaces by removing germs, viruses, and mould. A single click of the cap may instantly purify water for 60 seconds. Anyone can use this bottle, such as students who bring water bottles to school or engineers who use them at construction sites to stay hydrated.

The bottle is made of 18/8 stainless steel and features UV-C technology, which serves to optimise the UV-C technology's benefits. It's only 500ml, so it's small enough to take with you everywhere you go and it costs only RM450. Monaco blue, Obsidian black, Seaside Mint, Himalayan pink, and Granite White are all colours that are available. They are also perfectly cylindrical in form, allowing customers to handle their drinks more comfortably.

The LARQ Bottle's double-wall vacuum insulation keeps water cold for 24 hours and heated for 12 hours. It also features a Li-Polymer battery that may last up to a month after only 3 hours of charging. Firstly, screw on the cap and press normal or adventure mode. For normal mode, press the button once, and for adventure mode, push it twice. During the filtering cycle, give the bottle a moderate shake to let the UV light distribute evenly throughout the water.

The LARQ bottle is a lightweight and easy-to-use device. It has numerous good evaluations from former consumers, proving that it has a higher rating than any other water bottles on the market.
