

Week10

Relational Algebra & SQL Unary Operation: (Selection & Projection)

Objectives

- ◆ Unary Operation – Selection & Projection
- ◆ SQL : Simple queries

Relational Algebra Operations

(a) Selection

(b) Projection

(c) Cartesian product

(d) Union

(e) Intersection

(f) Set difference

Selection (or Restriction)

◆ $\sigma_{\text{predicate}} (R)$

- Works on a single relation R and defines a relation that contains only those tuples (rows) of R that satisfy the specified condition (*predicate*).

Example:

Staff

| staffNo | fName | lName | position | sex | DOB | salary | branchNo |
|---------|-------|-------|------------|-----|-----------|--------|----------|
| SL21 | John | White | Manager | M | 1-Oct-45 | 30000 | B005 |
| SG37 | Ann | Beech | Assistant | F | 10-Nov-60 | 12000 | B003 |
| SG14 | David | Ford | Supervisor | M | 24-Mar-58 | 18000 | B003 |
| SA9 | Mary | Howe | Assistant | F | 19-Feb-70 | 9000 | B007 |
| SG5 | Susan | Brand | Manager | F | 3-Jun-40 | 24000 | B003 |
| SL41 | Julie | Lee | Assistant | F | 13-Jun-65 | 9000 | B005 |

Example - Selection (or Restriction)

- ◆ List all staff with a salary greater than £10,000.

$\sigma_{\text{salary} > 10000}$ (Staff)

| staffNo | fName | lName | position | sex | DOB | salary | branchNo |
|---------|-------|-------|------------|-----|------------|--------|----------|
| SL21 | John | White | Manager | M | 1-Oct-45 | 30000 | B005 |
| SG37 | Ann | Beech | Assistant | F | 10-Nov-60 | 12000 | B003 |
| SG14 | David | Ford | Supervisor | M | 24- Mar-58 | 18000 | B003 |
| SG5 | Susan | Brand | Manager | F | 3-Jun-40 | 24000 | B003 |

Example : SQL for Selection

List all staff with a salary greater than 10,000.

```
SELECT *  
FROM Staff  
WHERE salary > 10000;
```

Projection

◆ $\Pi_{\text{col1}, \dots, \text{coln}}(\mathbf{R})$

- Works on a single relation \mathbf{R} and defines a relation that contains a vertical subset of \mathbf{R} , extracting the values of specified attributes and eliminating duplicates.

Example – Projection

- ◆ Produce a list of salaries for all staff, showing only staffNo, fName, lName, and salary details.

$\Pi_{\text{staffNo, fName, lName, salary}}(\text{Staff})$

| staffNo | fName | lName | salary |
|---------|-------|-------|--------|
| SL21 | John | White | 30000 |
| SG37 | Ann | Beech | 12000 |
| SG14 | David | Ford | 18000 |
| SA9 | Mary | Howe | 9000 |
| SG5 | Susan | Brand | 24000 |
| SL41 | Julie | Lee | 9000 |

Example : SQL for Projection

Example : Produce a list of salaries for all staff, showing only staff number, first and last names, and salary.

```
SELECT staffNo, fName, lName, salary  
FROM Staff;
```

Question: Write the RA operation & SQL

- ◆ **Produce a list of staff, showing only staffNo, fName, lName, and salary details, for those with salary more than £10,000.**

SELECT Statement

SELECT [DISTINCT | ALL]

{ * | [columnExpression [AS newName]] [,...] }

FROM TableName [alias] [, ...]

[WHERE condition]

[GROUP BY columnList] [HAVING condition]

[ORDER BY columnList]

SELECT Statement

| | |
|-----------------|---|
| FROM | Specifies table(s) to be used. |
| WHERE | Filters rows. |
| GROUP BY | Forms groups of rows with same column value. |
| HAVING | Filters groups subject to some condition. |
| SELECT | Specifies which columns are to appear in output. |
| ORDER BY | Specifies the order of the output. |

SELECT Statement

- ◆ **Order of the clauses cannot be changed.**
- ◆ **Only SELECT and FROM are mandatory.**

Example: Select All Columns, All Rows

List full details of all staff.

```
SELECT staffNo, fName, lName, address,  
        position, sex, DOB, salary, branchNo  
FROM Staff;
```

◆ **Can use * as an abbreviation for ‘all columns’:**

```
SELECT *  
FROM Staff;
```

Example : Select All Columns, All Rows

| staffNo | fName | lName | position | sex | DOB | salary | branchNo |
|---------|-------|-------|------------|-----|-----------|----------|----------|
| SL21 | John | White | Manager | M | 1-Oct-45 | 30000.00 | B005 |
| SG37 | Ann | Beech | Assistant | F | 10-Nov-60 | 12000.00 | B003 |
| SG14 | David | Ford | Supervisor | M | 24-Mar-58 | 18000.00 | B003 |
| SA9 | Mary | Howe | Assistant | F | 19-Feb-70 | 9000.00 | B007 |
| SG5 | Susan | Brand | Manager | F | 3-Jun-40 | 24000.00 | B003 |
| SL41 | Julie | Lee | Assistant | F | 13-Jun-65 | 9000.00 | B005 |

Example: Select Specific Columns, All Rows

Produce a list of salaries for all staff, showing only staff number, first and last names, and salary.

```
SELECT staffNo, fName, lName, salary  
FROM Staff;
```

Example : Select Specific Columns, All Rows

| staffNo | fName | lName | salary |
|---------|-------|-------|----------|
| SL21 | John | White | 30000.00 |
| SG37 | Ann | Beech | 12000.00 |
| SG14 | David | Ford | 18000.00 |
| SA9 | Mary | Howe | 9000.00 |
| SG5 | Susan | Brand | 24000.00 |
| SL41 | Julie | Lee | 9000.00 |

Example: Use of DISTINCT

Viewing

| clientNo | propertyNo | comment |
|----------|------------|----------------|
| CR76 | PG4 | too remote |
| CR56 | PA14 | too small |
| CR56 | PG4 | |
| CR56 | PG36 | |
| CR62 | PA14 | no dining room |

Example: Use of DISTINCT

List the property numbers of all properties that have been viewed.

```
SELECT propertyNo  
FROM Viewing;
```

| propertyNo |
|------------|
| PG4 |
| PA14 |
| PG4 |
| PG36 |
| PA14 |

Example: Use of DISTINCT

- ◆ Use **DISTINCT** to eliminate duplicates:

```
SELECT DISTINCT propertyNo  
FROM Viewing;
```

| propertyNo |
|------------|
| PA14 |
| PG4 |
| PG36 |

Example : Calculated Fields

Produce list of monthly salaries for all staff, showing staff number, first/last name, and salary.

```
SELECT staffNo, fName, lName, salary/12  
FROM Staff;
```

| staffNo | fName | lName | col4 |
|---------|-------|-------|---------|
| SL21 | John | White | 2500.00 |
| SG37 | Ann | Beech | 1000.00 |
| SG14 | David | Ford | 1500.00 |
| SA9 | Mary | Howe | 750.00 |
| SG5 | Susan | Brand | 2000.00 |
| SL41 | Julie | Lee | 750.00 |

Example : Calculated Fields

- ◆ To name column, use AS clause:

```
SELECT staffNo, fName, lName, salary/12  
      AS monthlySalary  
FROM Staff;
```

| staffNo | fName | lName | monthlySalary |
|---------|-------|-------|---------------|
| SL21 | John | White | 2500.00 |
| SG37 | Ann | Beech | 1000.00 |
| SG14 | David | Ford | 1500.00 |
| SA9 | Mary | Howe | 750.00 |
| SG5 | Susan | Brand | 2000.00 |
| SL41 | Julie | Lee | 750.00 |

Example : Comparison Search Condition

List all staff with a salary greater than 10,000.

```
SELECT staffNo, fName, lName, position, salary  
FROM Staff  
WHERE salary > 10000;
```

| staffNo | fName | lName | position | salary |
|---------|-------|-------|------------|----------|
| SL21 | John | White | Manager | 30000.00 |
| SG37 | Ann | Beech | Assistant | 12000.00 |
| SG14 | David | Ford | Supervisor | 18000.00 |
| SG5 | Susan | Brand | Manager | 24000.00 |

Example: Compound Comparison Search Condition

List addresses of all branch offices in London or Glasgow.

SELECT *

FROM Branch

WHERE city = 'London' OR city = 'Glasgow';

| branchNo | street | city | postcode |
|----------|--------------|---------|----------|
| B005 | 22 Deer Rd | London | SW1 4EH |
| B003 | 163 Main St | Glasgow | G11 9QX |
| B002 | 56 Clover Dr | London | NW10 6EU |

Example: Range Search Condition

List all staff with a salary between 20,000 and 30,000.

```
SELECT staffNo, fName, lName, position, salary  
FROM Staff  
WHERE salary BETWEEN 20000 AND 30000;
```

◆ BETWEEN test includes the endpoints of range.

Example: Range Search Condition

| staffNo | fName | lName | position | salary |
|---------|-------|-------|----------|----------|
| SL21 | John | White | Manager | 30000.00 |
| SG5 | Susan | Brand | Manager | 24000.00 |

Example: Range Search Condition

- ◆ Also a negated version **NOT BETWEEN**.
- ◆ **BETWEEN** does not add much to SQL's expressive power. Could also write:

```
SELECT staffNo, fName, lName, position, salary  
FROM Staff  
WHERE salary >= 20000 AND salary <= 30000;
```

- ◆ Useful, though, for a range of values.

Example: Set Membership

List all managers and supervisors.

```
SELECT staffNo, fName, lName, position  
FROM Staff  
WHERE position IN ('Manager', 'Supervisor');
```

| staffNo | fName | lName | position |
|---------|-------|-------|------------|
| SL21 | John | White | Manager |
| SG14 | David | Ford | Supervisor |
| SG5 | Susan | Brand | Manager |

Example: Set Membership

- ◆ There is a negated version (NOT IN).
- ◆ IN does not add much to SQL's expressive power.
Could have expressed this as:

```
SELECT staffNo, fName, lName, position
FROM Staff
WHERE position='Manager' OR
       position='Supervisor';
```

- ◆ IN is more efficient when set contains many values.

Example: Pattern Matching

Find all owners with the string 'Glasgow' in their address.

```
SELECT ownerNo, fName, lName, address, telNo  
FROM PrivateOwner  
WHERE address LIKE '%Glasgow%';
```

| ownerNo | fName | lName | address | telNo |
|---------|-------|--------|------------------------------|---------------|
| CO87 | Carol | Farrel | 6 Achray St, Glasgow G32 9DX | 0141-357-7419 |
| CO40 | Tina | Murphy | 63 Well St, Glasgow G42 | 0141-943-1728 |
| CO93 | Tony | Shaw | 12 Park Pl, Glasgow G4 0QR | 0141-225-7025 |

Example: Pattern Matching

- ◆ SQL has two special pattern matching symbols:
 - %: sequence of zero or more characters;
 - _ (underscore): any single character.
- ◆ LIKE ‘%Glasgow%’ means a sequence of characters of any length containing ‘*Glasgow*’.

Example: NULL Search Condition

List details of all viewings on property PG4 where a comment has not been supplied.

- ◆ There are 2 viewings for property PG4, one with and one without a comment.
- ◆ Have to test for null explicitly using special keyword IS NULL:

```
SELECT clientNo, viewDate  
FROM Viewing  
WHERE propertyNo = 'PG4' AND  
comment IS NULL;
```

Example: NULL Search Condition

| clientNo | viewDate |
|----------|-----------|
| CR56 | 26-May-04 |

- ◆ **Negated version (IS NOT NULL) can test for non-null values.**
